

## Project Update Communication

May 8, 2023

Dear Neighbor,

Please accept this update from New York Transco on the New York Energy Solution (NYES) project.

Over the weekend we energized the new transmission line running from Schodack to Pleasant Valley. We are aware that a noise is being emitted from the line in some areas. This is not a safety concern, but rather a noise called corona. Noise generated by corona is typically produced when protrusions are on the conductor (or wire) surface – particularly water droplets – and can sometimes make a crackling or hissing sound.

Our engineering, construction, and operations and maintenance teams are aware of the noise and are investigating it further. Over the course of the next few days, you may see Project personnel walking in and around the transmission corridor conducting testing, including measurements, photographs, and video. We'll follow up with additional information. In the meantime, please continue to reach out to our team with any questions – 855-433-3611 (toll free) or [info@NY-ES.com](mailto:info@NY-ES.com).

Thank you,
